Introduction to Networking Hardware

1. Define Networking Hardware.

Networking hardware refers to physical devices used to connect computers and other devices in a network.

2. Types of Networking Devices

1. Modem: A modem connects a network to the internet service provider.
2. Router: A router connects different networks and forwards data between them.
3. Switch: A switch connects multiple devices within a local area network (LAN).
4. Access Point: An access point allows wireless devices to connect to a network through Wi-Fi.
5. Network Cable: A network cable connects devices to transfer data.
